Think2Impact – Industry Workshop for Students

INFORMATION TECHNOLOGY PROBLEM STATEMENT

ITPRBLM – A - Empowering the Individual: An Intelligent One-to-One Learning Support System

To develop an intelligent tutoring system that creates an individual learning profile for each student, identifies specific knowledge gaps, misconceptions and practical difficulties, and provides personalised one-to-one support using Artificial Intelligence. The system will continuously assess the student's progress, adapt the level of guidance and measure whether targeted intervention improves learning outcomes and independent problem-solving ability.

A system approach to identify continuously the individual student's learning gaps, misconceptions and practical difficulties and address through timely, personalised interventions. Make your assumptions explicitly like scope, grade of the student etc.

ITPRBLM – B - Intelligent Emergency Rescue and Medical Response Optimisation System

A system approach to dynamically allocate and coordinate scarce emergency resources to reduce the time required to rescue victims and provide appropriate medical treatment

To develop a decision-support and simulation system to identify bottlenecks in emergency rescue and medical response and optimise the allocation of limited resources. The system will address road accidents within cities and on highways and can be extended to floods, cyclones and train accidents. Using GIS, simulation and Operations Research, it will determine how ambulances, rescue teams, routes and hospitals can be coordinated to reduce response and treatment delays. Please make relevant assumptions

Note:

For both the problems, the student teams shall develop a model for carrying out the above requirements. Min POC prototype is expected to be presented

The successful first and second ranking teams will be given an opportunity to implement a software system for the relevant problem. The time available will be 3 months for these two teams and the team members will be given internship certificates.
